Concept Review

Two Types of Print Statements

```
print("Hello World")

print(f"{your_name}")
```

Create variables

```
my_name = "Chris"
```

Create variables

```
friend = "Chris"
```

Create variables

```
friend = "Chris"
```

Create variables

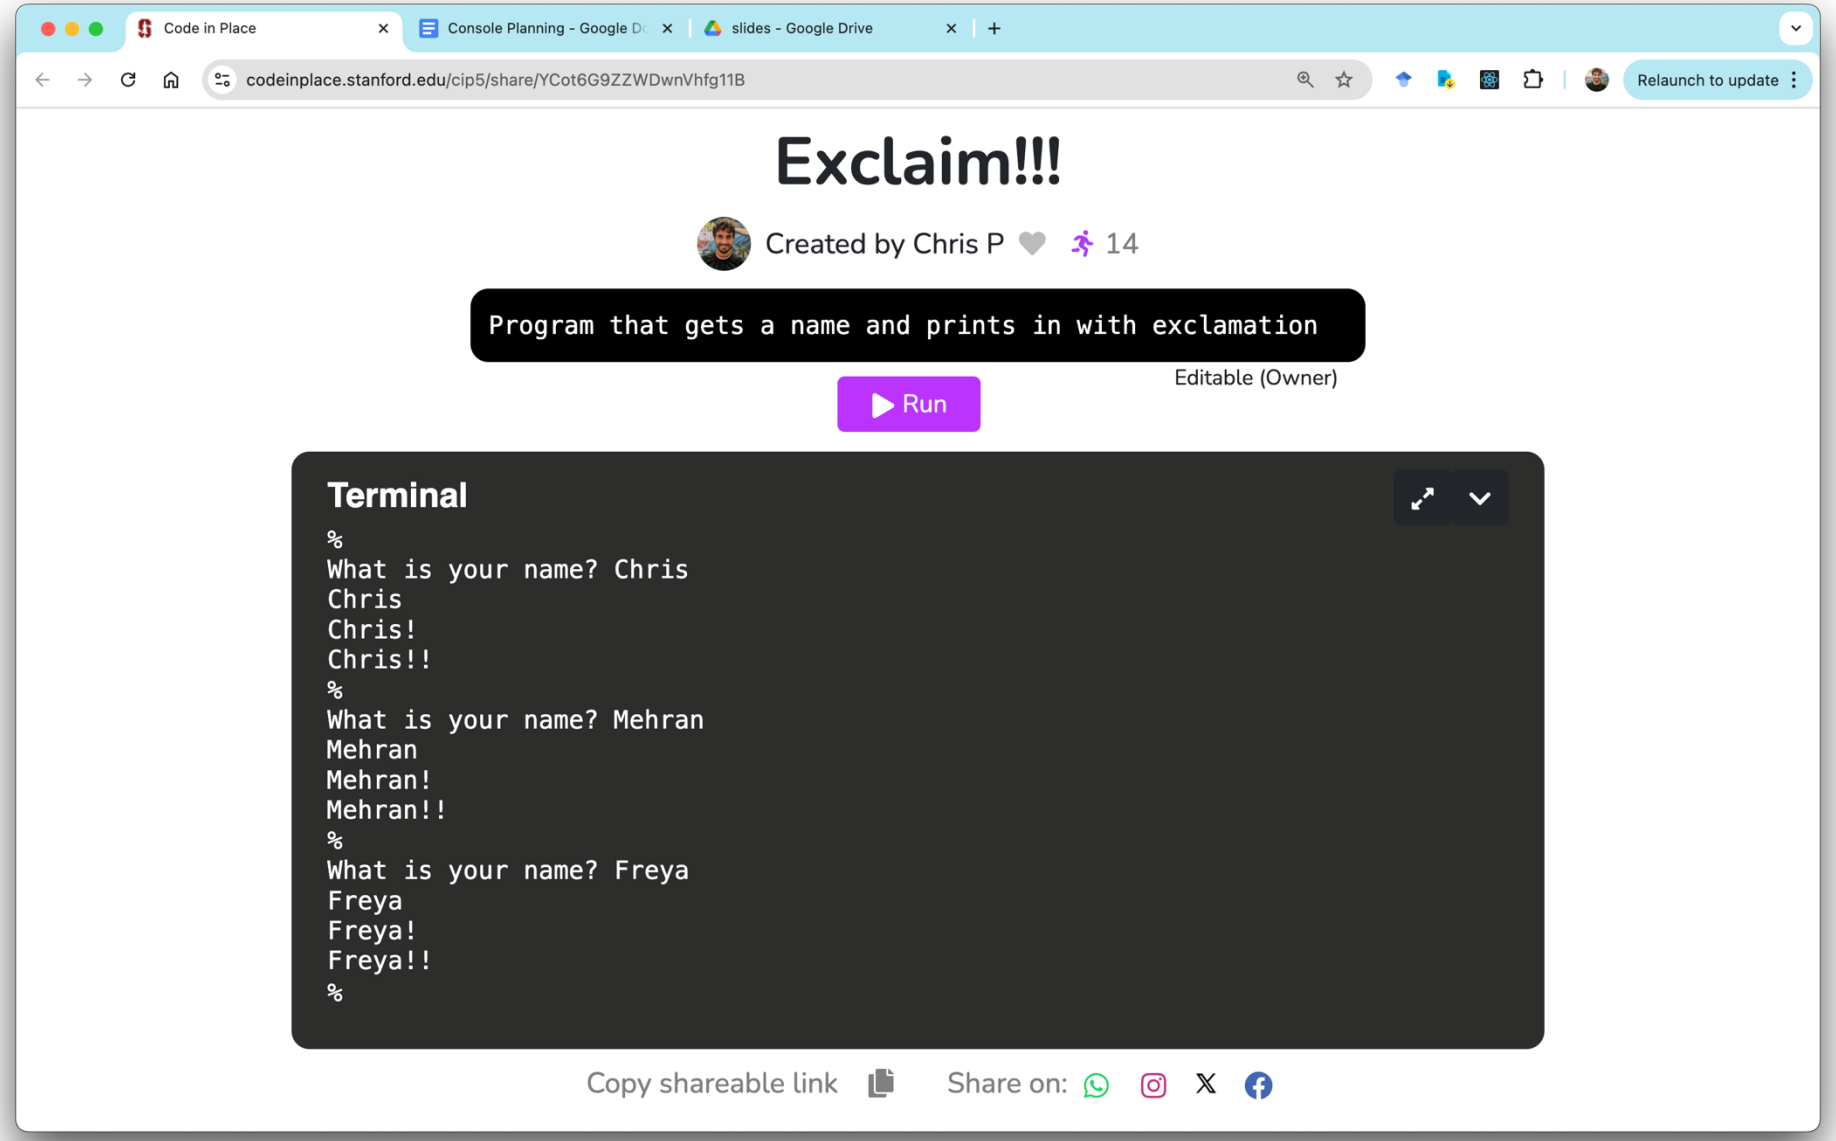

```
friend = "Julie"
```

Create variables

```
friend = "Julie"
```

Recall Our Goal

input

```
your_name = input("What is your name? ")
```

input

```
your_name = input("What is your name? ")
```

Terminal

```
% python main.py
What is your name?
```

input

```
your_name = input("What is your name? ")
```

Terminal

```
% python main.py
What is your name? Sierra
```

input

```
your_name = input("What is your name? ")
```

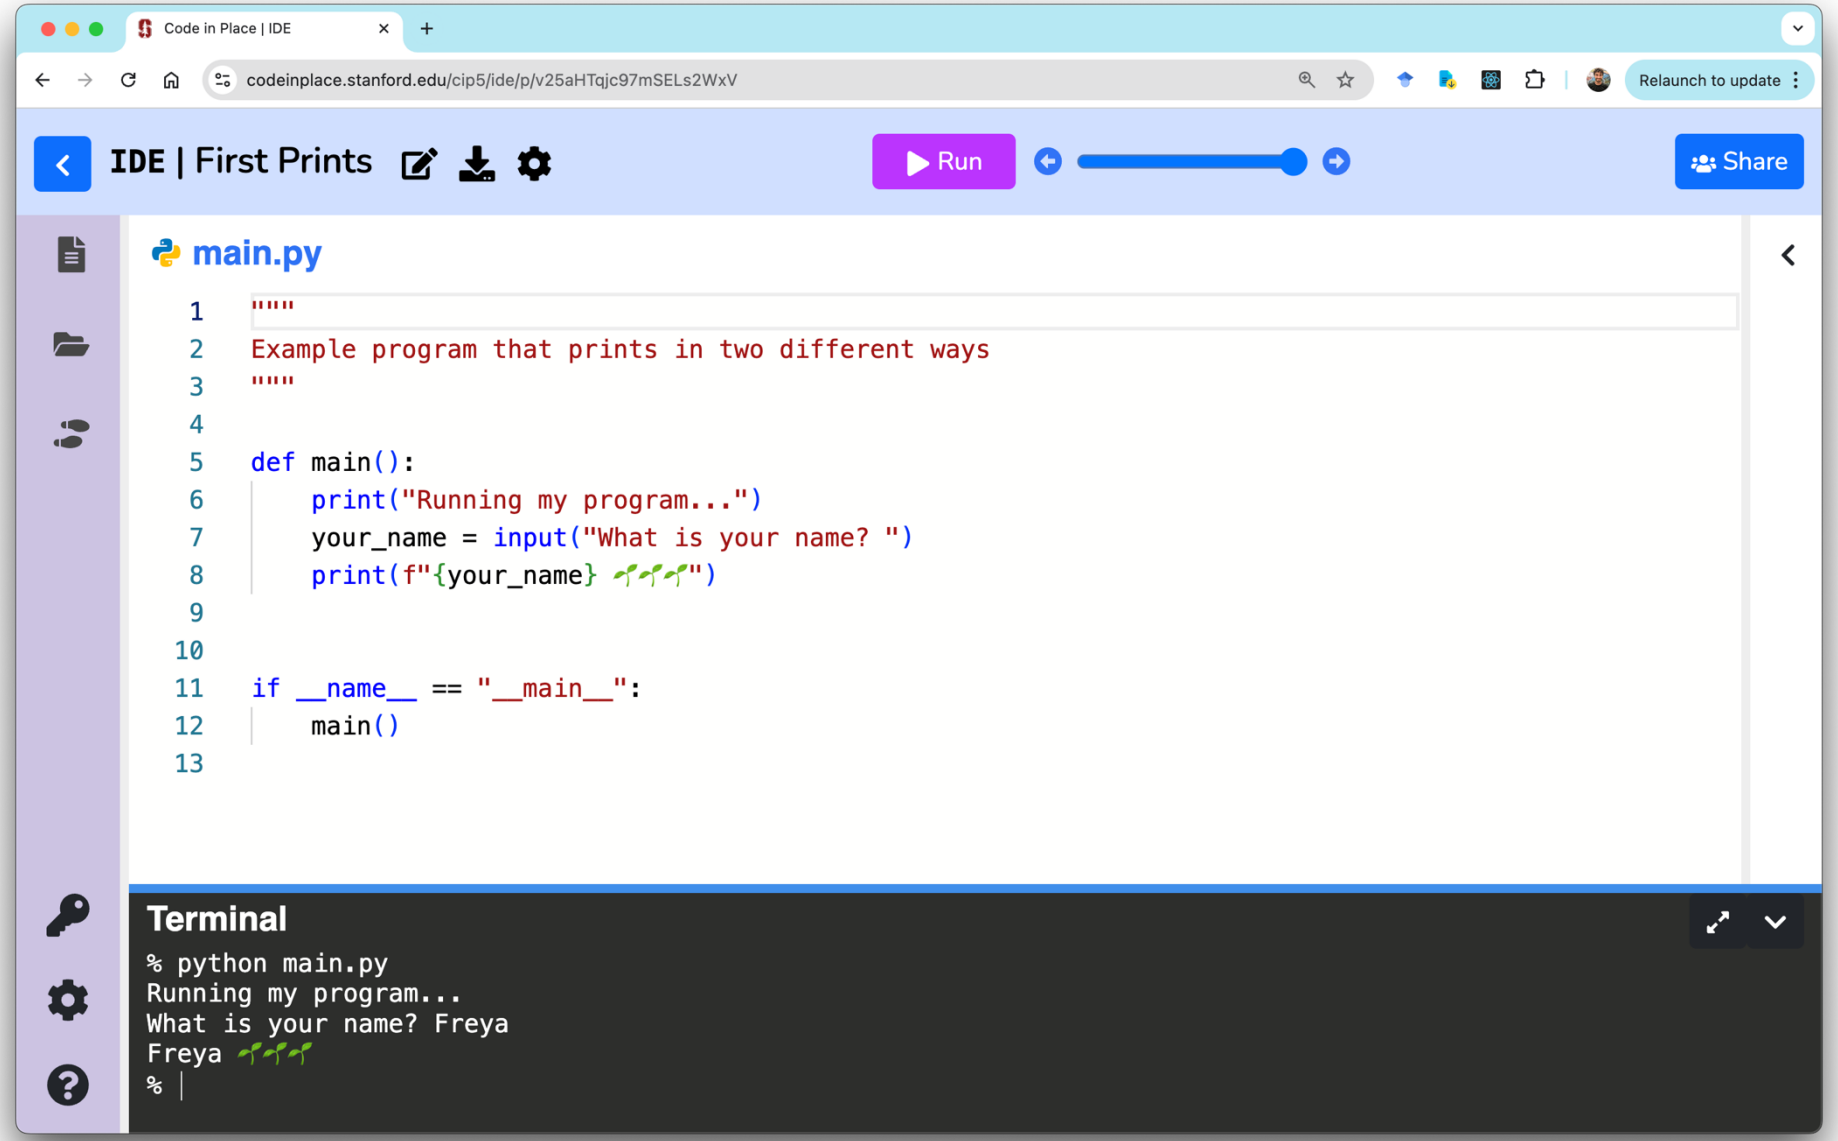

Terminal

```
% python main.py
What is your name? Sierra
```

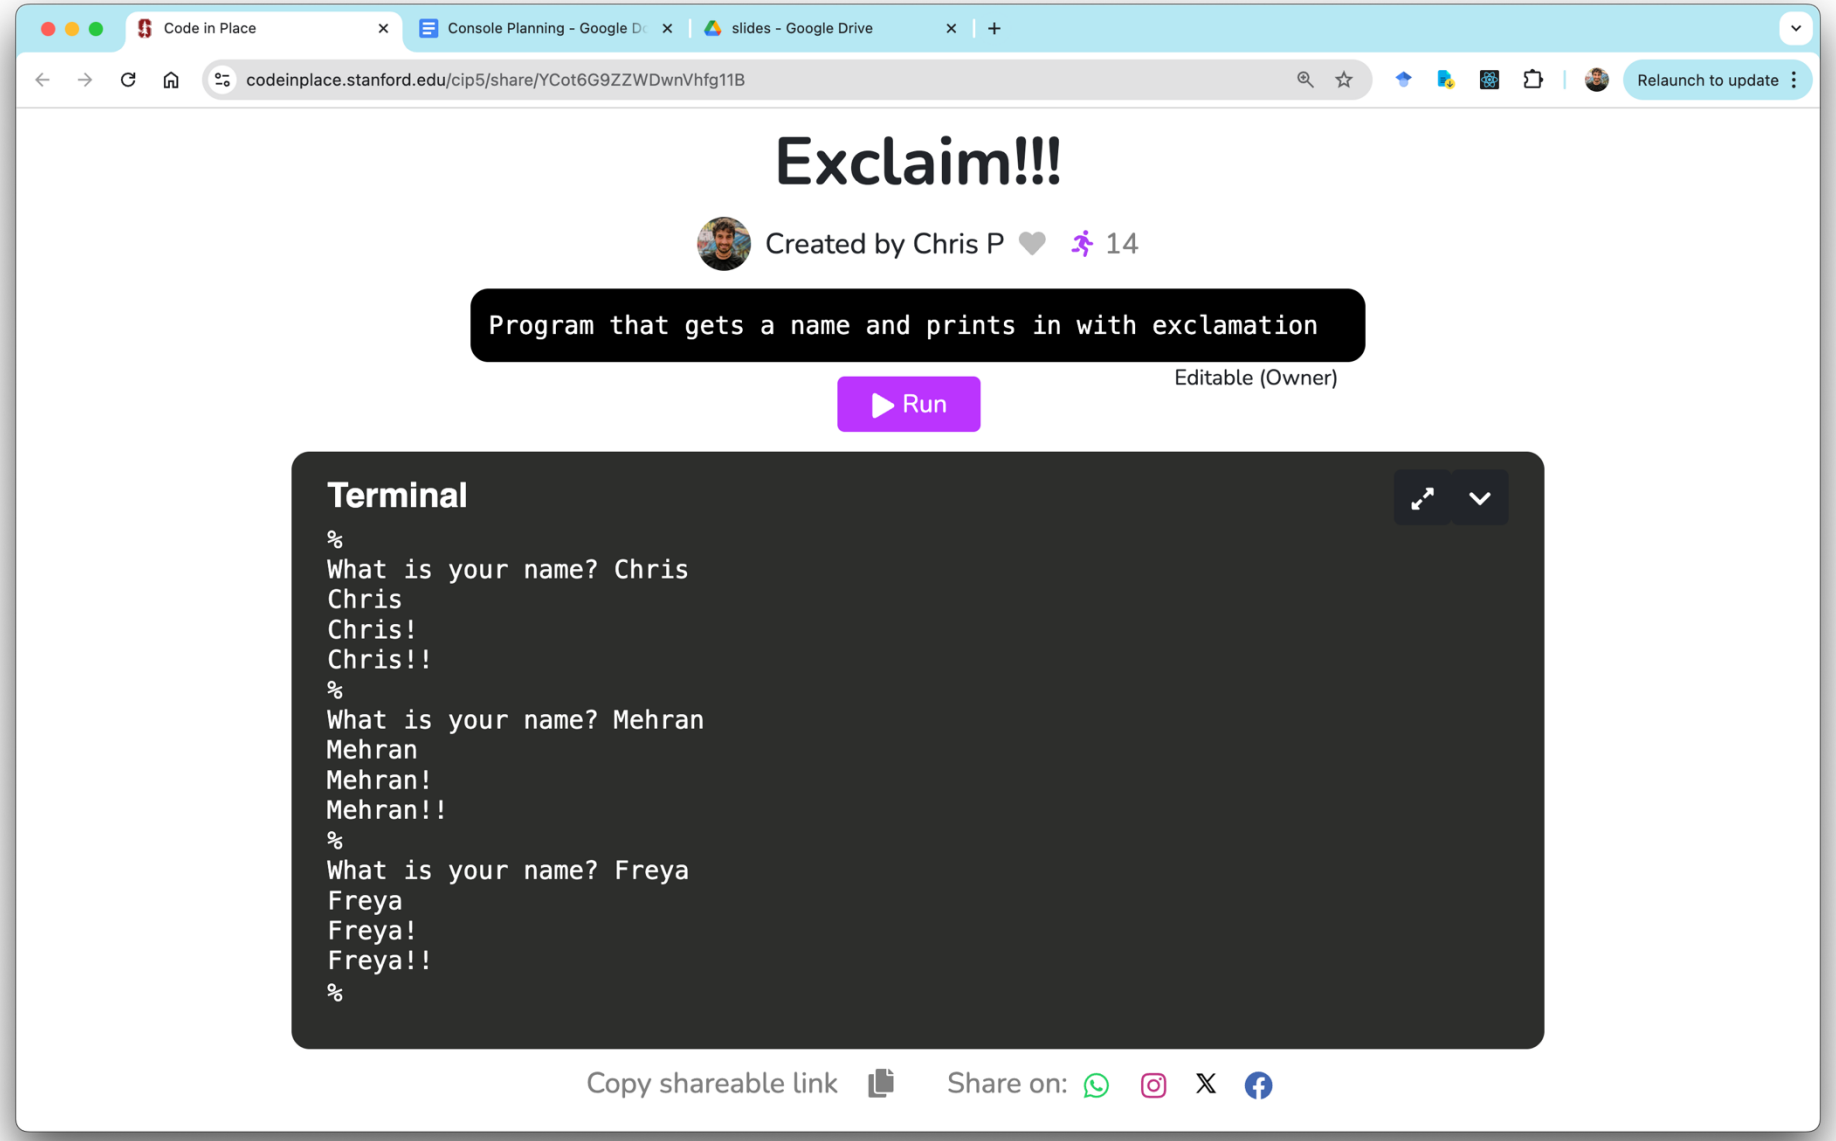

"Sierra"

your_name

Now with input
